EXECUTIVE SUMMARY

I am a creative and dynamic individual with lots of energy. After graduating college I Immersed myself in the developer world through a start-up. Soon after I created my own crypto-farm as well as created frontend and backend applications. As a software developer I look forward to be challenged in my field of work.

CAPSTONES

List:

List is front-end application project that can verify existing registered nurse licenses by license numbers in the state of Florida.

With List, employers can now have a way to search, save, and edit registered. The application allows users to search a valid nurse in its database, and make notes on their saved results. This application utilizes React, CSS, NPM, Figma, and ReactStrap.

- React was used for the frontend and NPM to manage dependency conflicts while building the application
- CSS and ReactStrap were used to style

https://github.com/Garcia-Julz/List

Mine Your Business:

Mine Your Business (MYB) is back-end application project that helps manages issue tickets for miners. Miners are people who partake in the network to compute crypto currency transactions.

Miners are able to record all of their devices, create issue tickets, and see other fellow miners that they can reach out for help. This application utilizes Django, SQL, Figma, and CSS, Bootstrap.

- Django was used to create the application as well as the data tables used in its back end.
- CSS and Bootstrap were used to style

EDUCATION

Computer Software Engineering Certificate

Nashville Software School

Graduate of a software boot camp that wants to apply technical knowledge from various work experiences deriving from the technology industry

Bachelor's Degree in Business Administration

Florida Atlantic University

Recent college graduate that attended FAU's first entrepreneur bootstrap class. This helped me as well as other self-driven students to start our own small business after college.

TECHNICAL EXPERIENCE

Full-stack Developer

Nashville Software School   *Sep 2019 – Present*

A full-time, intense, six-months full-stack web developer boot camp with team projects that focuses on React, CSS, JavaScript, with a back end focus on Python/Django and SQL.

- Implemented GitFlow on all group/individual projects and performed manual testing based off of behavior-driven development
- Utilized Object Oriented Programming Concepts for Python/Javascript

React Nutshell Project:

This application is where my team and I built and social media platform where users are able to post messages, add friends, and share links.

- Single-page applications with ReactJS, HTML, CSS, Web-pack, and Bootstrap
- Source code version control with Git/GitHub and Project Managing/tracking with Github Projects
- Application designed via white-boarding, wire-framing, and building and ERD

WORK EXPERIENCE

Theater III (CMS Specialist)

City of Lauderhill   *Aug 2017 – Present*

- Built and designed the layout of digital boards to be used in the performing arts center
- Actively manage content via ScreenCloud, BaseCamp, and Google Business
- Utilize efficient troubleshooting concepts

Independent Business Owner

Mine It, LLC   *Feb 2018 - Present*

Graphic card server farm that is used to compute crypto algorithms like DaggerHashimoto, Equihash, Zhash, MTP and a few others.

- Single handedly built and connected multiple "mining rigs" to compute different types of digital currency that run on Windows and Linux
- Utilized a software called MSI Afterburner to ensure each computer is capable to run efficiently and stably
- Manage servers that validate thousands of transactions as well as reviewing efficiency reports via Bash Shell from Linux or a GUI application from Windows
- Quarterly and annual reports on daily earnings

Marketing Coordinator

Squeeze, LLC   *Oct 2016 – Mar 2018*

Fin-tech startup whose focus is to give users the ability to save on their normal monthly expenses.

- Performed manual QA on data from multiple vendors to ensure accuracy
- Regularly performed blackbox testing on our newly released app versions on iPhone/Android. This would be followed with thorough documentation for any bugs via JIRA to our development team.
- Contributed to team meetings about upcoming features, issues in development, and web/app designs
- Cloud storage and content delivery using AWS to store website assets
